DETAILED ACTION

1. Applicant's arguments, see pages 7 and 8 of remarks, filed 10/08/2003, with respect to the rejection(s) of claim(s) 1-21 under 35 US 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found art.

Specification

1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 2623

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hayard (US 4764668).

With respect to claim 1, Hayard discloses a method for touch free measurement of a tool or accessories by one imaging means (see col. 2, lines 52-60, and receiver in figure 2) providing a number of measuring elements ...having a size large enough for making ...form and calculation of at least one image point (see col. 4, lines 1-58, col. 5, lines 5-10 for the 3D calculation, and see figure 2 for the marks, numerical 30, 31, 32, 33) as claimed. However, he fails to explicitly disclose the part of the mark happens to be obscured. But, it is seen from the figure 2 the marks 30, 31, 32 and 33 can be use as the obscured or basically any mark could be simply be called as obscured mark. Therefore, at the time of invention one can take the Hayard's disclosure for reorganization of the 3D mark and could create the 3D image of any obscured mark for the purpose of 3D creation.

With respect to claims 2-9 Hayard discloses lined measuring elements, are positioned on at least one row, ...line going through; calculation of the 3D position;

Art Unit: 2623

markers having the same shape; uniquely determined position for each differently shaped marker; at least two rows; rows are parallel; roll of the tool is derived, (see figures 1-4 for the lined markers; col. 5, lines 5-10 for calculation of 3D position, figure 4 for lined markers, and col. 4-5 for the description of calculation and the methodology for calculating the position of the markers) as claimed.

Claims 10-21 are rejected for the same reasons as set forth for the rejection of claims 1-9, because claims 10-21 are the apparatus claims claiming the method as claimed in claims 1-9.
